Item No.	Qty	Unit	Specifications	Unit Price (Php)	Total Price (Php)
1	1	unit	Advanced Patent Database Subscription a. General Description covers patent families (inventions) covers patent records abstract with different languages provides access to worldwide gives access to the information about patent		

- o Full text: All the text that existed on the document when it was published, plus current legal status when available.
- o Front page and claims: The fields/information on the first page of the document when it was published, current legal status information when available, plus the claims.
- o PDF/Images: The actual published patent document, as represented in a PDF or image file.
- o English translation: Ability to translate the patent documents to the English language. More advantageous if these are human-assisted translation for a more accurate translation and correction of error119

foreign priority, or applications that are filed outside the 12 month grace period (as stipulated by the Paris Convention)

3) Predictive Data

Allows users to provide critical answers to essential questions about patents. Intelligent algorithms combine machine learning with editorially enhanced information from the World Patents Index to provide highly accurate, actionable intelligence on a patent's status as alive, dead, or indeterminate, plus the status of the related family and also expiration dates and remaining life for the patent.

On Search Capability

1) Smart Search

Allows the users to search through an automated patent-pending enhanced search method. Once the user enters text (of any length) and analyzes that text for key terms, Smart Search should replicate the processes a skilled patent searcher uses to retrieve precise, complete results based on the key terms extracted from the text.

2) Fielded Search

Allows the users to build a query to search for records based on key terms and dates in specific fields. Once the result details can be viewed for the records, then further actions such as setting alerts, saving records to work files, downloading document copies, or performing analysis on the results can be taken.

On Data Analysis

1) Charts

Allows a user to visualize the data in the results, which can help in understanding trends, reveal unexpected data points, or provide a simple snapshot of the current market.

2) Insights Dashboard

Provides a visual overview of the patent search results, with answers to common questions and automatically calculated statistics. Insights Dashboard should work in parallel to the more detailed results list to help a user focus on key areas, discover trends, and create presentation-ready reports. The Insights Dashboard should initially display a set of charts with a single

5) Saved searches

Allows the users to save the results so that the searches can be rerun later.

6) Search History

Allows the users to record the search hi 58 270
